

ANDROMEDA Light SYSTEM COMPONENTS:

C2BOX

Command and control unit

Autonomous guidance of RIFLE AD through GOT-U Portable usage. Unattended device equipped with MESH communication platform based on LORA, used for connection of other components.

STAR MANPACK AD

Modular multiband digital jammer

The STAR MANPACK AD jammer is dedicated for protection against UAV. Used as portable device equipped with omnidirectional or directional antennas.

RIFLE AD

Handheld guidance antenna system

Switching on/off of selected jammed bands is enabled either by an external jammer keyboard integrated in the stock of the antenna system or it is possible to activate all jammed bands at once while pressing the RIFLE AD trigger. For easier orientation in space, it is possible to attach a monocular telescope to the body of the antenna system with a dovetail groove.

GOT-U Portable

Electro-optical monitoring system

Handheld electro-optical system GOT-U Portable with datalink is an ultramodern compact optical device, designed for monitoring and observing areas in limited visibility conditions.
